

Drill Press Platform

These are the measurements of my ultimate Drill Press Platform. The Fence is centered on the platform. I think a 500mm table with a 1000mm fence is a nice and good size for average use. Without a template, I would make the round insert square. I do not use a scale on my Fence, but when you need a scale, a fence mounted on the side is the only way to get consistent results.

The dust extraction pipe is 50mm and is just a rain pipe. I used three 45 degrees pieces to give me the flexibility to reach the drill bit.
